TABLE OF CONTENTS

GLOSSARY

DTMF   Dual Tone Multi Frequency
                    The tones are transmitted by the phone to the
                    network. They are used to interrogate answering
                    machines, transmit codes,...

GSM Network   Global System for Mobile communications. The type
                    of phone network used by your phone.

PIN Code   Personnal Identification Number, this is the secret
                    code of the SIM Card. If you, or someone else,
                    enters the wrong PIN code three times your SIM
                    card is blocked. **If this happens, please contact
                    your service provider.**

PIN2 Code   Secret code that allows you to access certain SIM
                    card dependent features. If you, or someone else,
                    enters the wrong PIN2 code three times your SIM
                    card is blocked. **If this happens, please contact
                    your service provider.**

PUK Code   Secret code used to unblock your SIM card if you, or
                    someone else, enters the wrong PIN code three
                    times. **This code will be given to you by your
                    service provider.**

Roaming   Using your phone in a network other than your
                    home network in your country or abroad.

SIM card   Subscriber Identification Module. This card which is
                    provided by your GSM service provider allows you
                    to make phone calls with your GSM phone. Your
                    phone number is contained inside the card.

SMS   Short Messages Service. This service provided by
                    the operator allows you to send and receive short
                    written messages (Maximum : 160 characters).

	8+9*4

Enter numbers on the second line of the screen:
Add, substract, multiply or divide.

 * +

To find the result.

 # =

Ask for help and your mobile gives the beginning of the operation.

 OK

The game is played in 10 rounds.
The score depends on :
• time spent,
• number of jokers asked for
• number of wrong attempts.

*The player can exit the games at any time by tapping " Menu " on the keypad.*
A player answering an incoming call while playing "games" will automatically switch the game off.

# Before you start

The micro-SIM card

To use your phone, you must insert a valid
micro-SIM card supplied by your GSM network
operator. When you switch the phone on, it
may ask for the PIN code. The PIN code is the
secret code of the micro-SIM card.

The micro-SIM card contains your subscription number and phone number. It
also contains a memory in which you can store phone numbers and messages. If
you use your micro-SIM card on another phone, you still retain the same phone
number, stored numbers, and messages.
The battery

Your phone is powered by a rechargeable battery.
- After you plug in the battery, please wait a few seconds
  before pressing the on/off key to switch the phone on.

- A battery only reaches its maximum capacity after being
  totally discharged and recharged 2 or 3 times.

- A battery lasts longer if you allow it to fully discharge from
  time to time.

- If you do not use your phone for several days, it is better
  to remove the battery.

Remove the battery cover

Press on the latch on the back of the phone
and lift off the battery cover.

Remove the battery (if necessary)

Lift up on the bottom of the battery and
remove it from the phone.
Insert the micro-SIM card

First, place the micro-SIM card into the appropriate slot in the battery compartment (the clipped corner should be at the top left).

Then, slide the card with your finger until it stops.
Insert the battery

1. Keep the battery + and - on the top facing the + and - of the phone.
2. Slide the battery onto the contacts points and press.
Replace the battery cover

Hook the battery cover onto the hinges on bottom of phone and press forward until the latch catches.
Charge the battery

With the battery inserted in the phone, plug the connector into the right socket at the base of the phone. Next, plug the transformer unit into an AC power socket.
The only way to turn off the charger is to unplug it, so use an easily accessible AC power socket.

The battery icon on your phone's display indicates the state of the charge process:

- Bars moving =   battery is charging.
- Bars steady =   battery is fully charged.
- Battery outline flashing (see Troubleshooting p. 33).

You can switch the phone on and use it during charging.
Do not wait for an empty battery to charge your phone again in order to save battery capacity.

The first time you charge the battery and later, if it is completely discharged, the battery icon will only appear 2 to 3 minutes after you connect the charger. Please charge the phone for a minimum of 3 hours before first use.

Touchtones (DTMF)

During a call or in direct dialling, the numeric keys always transmit DTMF tones (Dual Tone Multi Frequency) also known as "touchtones".

These tones are used to operate services that you can reach with your phone, like a pager or an answering machine.

Example, to consult your home answering machine:

Enter telephone number of your home answering machine.

```
0123456789_
,
```

Enter a "wait" signal to give time for the phone to connect.

```
0123456789w_
```

Enter the password of your home answering machine (e.g.: code: 9876).

Hide your identity

Enter "pause" character.

```
0123456789w9
876p_
```

Enter code to listen to new message (e.g.: code 3).

```
0123456789w
876p3_
```

Call.

Hide your identity

If you type #31# followed by the phone number you call, your phone number is hidden to the other person.

```
#31#0123456
78_
```

Availability of this feature depends on your network.

Setting up Flash Dial

You can associate 8 names in the Names list or FDN list with keys 2-9 on the keypad. A long press on one of these keys will automatically dial the the associated number.

```
Names
◄ Vincent ►
```

Choose the name you want to make Flash Dial.

Press and hold to link the name to key 4.

CANCEL FLASH DIAL

```
Names
◄ Vincent ►
```

Press and hold to cancel link.

TO FLASH DIAL

```
Network
```

Press and hold to dial linked number.

Discover the Compass Key

The Compass Key is your navigator while in the menus.

Press (MENU) to enter or exit the menus.

Move one menu-level back.

Switches to option on the left.   Switches to option on the right.

Move forward
or validate the displayed option.

AUTHENTIC ACCESSORIES

Ask for Philips Authentic Accessories where you bought your Philips phone.

RADIO WAVES

- Your phone transmits/receives radio waves in the GSM frequency (900/1800 Hhz).
- The GSM network controls transmission power (0.01 to 2 watts).
- Your phone complies with all relevant safety standards.
- The CE mark on your phone shows compliancy with European electromagnetic compatibility (Ref. 89/336/EEC) and low voltage directives (Ref. 73/23/EEC).

SAFETY PRECAUTIONS

- Careless use can cause harm to you and others.
- Please inquire and respect local laws and regulations.
- Use your phone in the normal operating position (to ear).
- Avoid touching the antenna while a call is in progress.
- Do not use your phone if the antenna is damaged (risk of minor skin burn).
- Keep your phone in a safe place, out of reach of small children.
- Check with other manufacturers that consumer electronics will not be affected by radio energy.
- Avoid use of phone while driving. It affects your concentration.
- Switch phone off in an aircraft. It is illegal to use cellular phones when airborne.
- Switch phone off near hospitals or medical equipment.
- Ask manufacturer about radio wave shielding of electronic medical devices you may use (pacemaker, hearing aid).
- Switch phone off where blasting is in progress (for example in quarries).
- Switch phone off in potentially flammable atmosphere (petrol stations, fuel depot, chemical plants).

ENVIRONMENTAL CARE

- Please remember to observe the local regulation regarding the disposal of your packaging material, exhausted batteries and old phone and where possible promote their recycling.
- *The phone must ALWAYS be switched OFF by pressing the Red ON/OFF key and never by removing the battery while the phone is ON. Otherwise, the stability of the settings, alarm clock and ring cannot be guaranteed.*
- *The phone is equipped with an alarm clock that, if set, will ring. If the phone is off and the alarm rings, no radio waves are transmitted. Press any key to turn off the alarm.*

TROUBLESHOOTING

PROBLEM	SOLUTION
The phone does not switch on.	Check if the battery is correctly inserted (big arrow facing you and pointing to the top) and/or charge the phone until the battery icon has stopped flashing.
The display shows "BLOCKED" when you switch on.	Somebody tried to use your phone but did not know the PIN code or Unblocking code. Contact your service provider.
After switching on your phone, the SIM lock code is required (NCK, NSCK, SPCK,CCK, PCK).	Your phone is configured to work only with your service provider's SIM card. Please contact your service provider to get further information.
The Y and ☰ symbols are not displayed.	The network connection is lost. Either you are in a radio shadow (in a tunnel or between tall buildings) or you are outside of the network coverage area. Try from another place.
The display doesn't respond (or responds slowly) to key pushes.	The display responds more slowly at very low temperatures. This is normal and does not affect the operation of the phone. Take the phone to a warmer place and try again.
Your phone shows "insert SIM" on the display.	Remove your battery. Check that the micro SIM card is correctly inserted (clipped corner at the top left - see page 3).
Your phone does not display the caller's number.	This feature is subscription dependent. If your subscription does not support it, the phone displays "Call". Please contact your service provider to get further information.
When attempting to use a feature in the menu, the mobile displays " not allowed ".	Many features are subscription dependent. They are only available, therefore, if your subscription supports them. Please contact your service provider to get further information.

PROBLEM	SOLUTION
You cannot send messages or your correspondent does not receive your messages.	Some networks do not allow message exchange with other networks. Please contact your service provider to get further information. The network can be crowded and messages can take some time to arrive.
Your correspondent does not receive your emotion icons.	Only Philips phones (see page 18) can receive emotion icons.
The display shows SIM FAILURE.	Your SIM card may be damaged. Please contact your network operator.
The display shows IMSI FAILURE.	The problem is related to your subscription. Please contact your network operator.
Your telephone is wet.	Switch it off and remove the battery (see page 2). Let them to dry separately 24 hours before using it again.
You cannot enter operator services.	Press and hold the "Menu" key. If this does not work, please contact your service provider.
Keys tones or ringer menu have disappeared.	You are probably in Silent or Vibra mode (see page 23).
While charging the battery icon is not displayed.	Your battery is completely empty, please wait a few minutes after connecting the charger.
When charging the battery, the battery icon shows no bars and the outline is flashing.	Only charge the battery in an environment where the temperature does not go below 0˚C (32˚F) or above 50˚C (113˚F).
Ear piece volume is too low or too high.	You can adjust it (see page 8).
